

# SIGN EVO RECESSED & SIGN EVO SURFACE IP54

High-efficiency circular luminaires for demanding architecture

---

With the introduction of SIGN EVO Recessed and the new SIGN EVO Surface IP54, PROLICHT expands the SIGN product family with two consistently refined solutions for architectural lighting. The new variants combine high light output, a reduced design language and installation-focused engineering with extended application possibilities.

SIGN EVO stands for clarity and efficiency: a circular luminaire reduced to its essentials, developed for maximum performance and timeless integration into a wide range of architectural concepts.

## **SIGN EVO RECESSED – ENGINEERED FOR PERFORMANCE**

SIGN EVO Recessed is a high-efficiency circular recessed luminaire designed for professional applications where performance, visual comfort and ease of installation are equally essential.

Available in three diameters – 419 mm, 594 mm and 874 mm – the luminaire achieves up to 166 lm/W, making it an ideal solution for powerful, uniform general lighting with outstanding energy efficiency.

A choice of opal, clear microprism and microprism optics allows precise adaptation to different visual comfort requirements and lighting concepts. Control options include On/Off, DALI, Casambi and Matter, enabling seamless integration into both conventional and smart lighting systems. Particular emphasis was placed on installation efficiency: an integrated cut-out template supports precise ceiling preparation, click-in mounting springs enable fast fixing, and pre-installation of connectors supports efficient construction workflows. The push-fit mounting system allows quick final installation by simply pressing the luminaire into the ceiling.

## **SIGN EVO SURFACE IP54 – PERFORMANCE WITH PROTECTION**

With SIGN EVO Surface IP54, PROLICHT adds a variant with IP54 protection to the family. It provides reliable resistance against dust and splash water, making it ideal for bathrooms, transitional areas and environments with increased requirements.

Despite the extended protection rating, design and light quality remain unchanged: the characteristic circular geometry, the clear design language and the high light output continue to define this version.

## **SIGN – ONE FAMILY, MANY POSSIBILITIES**

With SIGN EVO Recessed and SIGN EVO Surface IP54, PROLICHT further strengthens the performance-oriented segment of the SIGN product family for demanding architectural applications. The new variants expand the existing portfolio with additional installation options and applica-

tion flexibility.

At the same time, SIGN remains a deliberately broad and versatile luminaire family. Alongside functional, high-performance solutions, it also includes SIGN DIVA variants with a stronger design focus, featuring movable elements, distinctive lighting effects and decorative optics.

In this way, SIGN combines high lighting performance and creative versatility within one coherent system – differentiated in expression, clear in form and open to a wide range of architectural concepts.

Reduced in design. Strong in performance.

**Designed to create.**
